Professional Profile

Senior Technical & Functional Consultant with 6+ years of experience delivering enterprise solutions on Microsoft Power Platform, Azure and AI. Combines three strengths: (1) Power Platform delivery (Model-Driven Apps, Canvas Apps, Power Pages, Power Automate, PCF, Copilot Studio); (2) Azure cloud and infrastructure engineering, including landing zones, private networking, DNS, Azure AI Foundry environments and secure CI/CD; and (3) applied AI engineering (RAG pipelines, multi-agent systems, LLM-powered applications). Trusted to take a solution from requirements and architecture through to a secured, production-ready Azure deployment. PL-200, AI-102 and DP-100 certified.

Core Competencies

- **Azure Infrastructure & Networking:** Landing zone design, hub-and-spoke VNets, private endpoints, Private DNS zones, subnet and NSG design, multi-region deployment
- **Infrastructure as Code:** Bicep and Azure Verified Modules (AVM), Azure DevOps YAML pipelines, service connections, multi-environment promotion
- **Azure AI Platform:** Azure AI Foundry (projects, agents, model deployments), Azure OpenAI, Azure AI Document Intelligence, Content Understanding, Azure AI Search
- **DevSecOps:** Company-standard security analysis pipelines with SonarQube and Mend scanning, secure build and release pipelines for .NET, Azure Functions and PCF
- **Power Platform:** Model-Driven and Canvas Apps, Power Pages, Power Automate, Dataverse, Copilot Studio, PCF controls (React/TypeScript), ALM and solution pipelines
- **AI Engineering:** RAG, KAG, graph-based AI, multi-agent systems (LangChain, LangGraph, Azure Agentic Framework), KV-cache optimised agent architectures
- **Development:** Python (FastAPI, Django, Flask), .NET/C#, React, TypeScript, Vite, Angular, Docker

Professional Experience

Senior Technical & Functional Consultant (Azure, AI & Power Platform) – Tekenable Ltd

Remote, Ireland | Feb 2022 – Present

Azure Infrastructure & Security (Acorn, MIBI, Tek Voice, MFCU and other client projects)

- Designed and built the Azure infrastructure for the majority of the company's client projects, delivering the complete environment setup from landing zone through to application and AI workloads, including Acorn, MIBI, Tek Voice and MFCU.
- Established Azure landing zones with subscription and resource group structure, governance, and consistent naming and tagging standards.
- Designed and implemented network architecture: virtual networks and subnets, private endpoints, and Private DNS zones for secure, private connectivity to PaaS and AI services.
- Provisioned and configured Azure AI Foundry environments, including projects, agents and model deployments, together with Azure AI Document Intelligence for document-processing workloads.
- Codified infrastructure as reusable, repeatable IaC using Bicep and Azure Verified Modules (AVM), deployed through Azure DevOps across multi-region (North Europe / Sweden Central) production environments; resolved complex deployment issues involving SKU/region compatibility, cross-resource-group scoping and private endpoint configuration.
- Built and rolled out a company-standard Azure DevOps YAML security analysis pipeline integrating SonarQube and Mend scanning with .NET builds, raising the security baseline across projects.
- Configured Azure DevOps service connections and least-privilege access for IaC pipelines within Entra ID permission constraints.
- Implemented CI/CD pipelines for Azure Functions and PCF components, improving deployment speed and reliability.

AI Solutions

- Delivered the "Chat with Docs" POC using Azure OpenAI, Azure Document Intelligence and Azure Cognitive Search, later extended into a production client solution.

- Designed and deployed enterprise chatbots and AI agents in Microsoft Copilot Studio with multi-turn flows, topic-based routing and generative answers grounded in SharePoint and Dataverse via Azure OpenAI; extended agents with Power Automate actions and Azure Function plugins to perform real-time lookups and surface Dynamics 365 records across Teams and web channels.
- Built POCs using Retrieval-Augmented Generation (RAG), Knowledge-Augmented Generation (KAG) and graph-based AI for advanced contextual reasoning.
- Designed multi-agent systems with Azure Agentic Framework, LangChain and LangGraph, and optimised memory-efficient agentic architectures using KV cache.

Power Platform & Application Delivery

- Led end-to-end delivery of EPassport ERA: requirements gathering, user stories, development and weekly client demos.
- Architected Model-Driven Apps on Dynamics 365 / Dataverse, including custom tables, business rules, forms, views, dashboards and role-based security.
- Developed advanced PCF controls using React and TypeScript, including a five-level horse pedigree visualiser (React Query) embedded in model-driven and canvas apps.
- Built Canvas Apps connected to Dataverse, SharePoint and custom REST APIs; delivered Power Pages portals with Liquid templates, web roles and entity permissions.
- Engineered Power Automate flows (cloud, scheduled, instant) for approvals, notifications and data synchronisation across Dataverse, SharePoint, Teams and third-party services.
- Built custom C# connectors and Azure Functions (.NET and Python) as serverless middleware and webhook handlers, including integration with on-premises systems via the On-Premises Data Gateway.
- Engineered a media streaming service and third-party broadcasting endpoints for France and the UK.
- Managed ALM across environments using solution layers, environment variables and automated Azure DevOps pipelines.
- Served as Functional Consultant: led discovery workshops, translated business requirements into Power Platform solutions and provided functional guidance throughout the delivery lifecycle.

Technologies: Azure (Landing Zones, VNet, Private DNS, Private Endpoints, AI Foundry, OpenAI, Document Intelligence, AI Search, Functions, Key Vault), Bicep, AVM, Azure DevOps, SonarQube, Mend, Copilot Studio, Power Apps, Power Automate, Power Pages,

PCF, Dataverse, Python, .NET, React, Docker

Full-Stack Developer – Code Breakers

Remote, USA | Oct 2020 – Jan 2022

- Built an online hotel management system with real-time booking, room inventory and payment integration.
- Developed an online taxi dispatch system with live GPS tracking, driver–passenger matching and Google Maps integration.
- *Technologies:* Node.js, React, React Native, Google Maps, Firebase

Full-Stack Developer – AlphaSquad

Onsite, Islamabad | Jan 2020 – Sep 2020

- Designed and deployed a full-scale Online Education System for a Saudi client covering course management, live sessions and authentication, using a serverless architecture.
- *Technologies:* Node.js, React, React Native, Serverless, GraphQL, Firebase

Certifications

- PL-200: Microsoft Power Platform Functional Consultant (Oct 2025)
- DP-100: Azure Data Scientist Associate (Jan 2025)
- AI-102: Designing and Implementing a Microsoft Azure AI Solution (Jun 2023)
- AI-900: Microsoft Azure AI Fundamentals (Jul 2023)
- PL-900: Microsoft Power Platform Fundamentals (Aug 2023)
- AZ-900: Microsoft Azure Fundamentals (Jul 2023)

Open-Source Contribution

SQL Query to Sentence using Hugging Face: custom Dynamics 365 PCF control that converts SQL queries into natural language using a Hugging Face model (React, FastAPI, Hugging Face, Docker).

Education

Bachelor of Engineering in Software Engineering, Air University, Islamabad | 2017 – 2020 | CGPA 3.01

- Final Year Project: Telecommute Churn Prediction Model (Python, Django), 95% accuracy.

Internships & Research

- **National Centre for Cyber Security, Air University** (May – Jul 2020): malware analysis using IDA Pro and Ghidra.
- **Air University Center of Smart Data** (Sep 2019 – Jul 2020): trained ML models to identify drug–drug interactions in biomedical text, achieving an F1-score of 73%, comparable to leading research.
